December 4, 2001

Dear PSR Corporation,

On behalf of the Redondo Beach Firefighter's Association I would like to thank you for the excellent training recently brought to our Fire Department by your company. Realistic job specific training has become scarce in our field due to a variety of factors so the hands-on unique methods for body response to prevent injury of the back, shoulders, knees, ankles, etc, thought in the presentation were pretty enthusiastically received by our members.

Your instructors are very professional and earn firefighters respect immediately during the seminar though their obvious experience, preparation, and understanding of our work requirements. **The unique solutions your company has developed for the routine and most difficult emergency situations are as revolutionary as the advent of positive pressure ventilation for the fire service. Imprinting body mechanics to overcome our bodies' weakest links in patient extrication, transfer, transport and other career work scenarios is a lesson every firefighter should learn before their first day on the job.**

I have received many positive comments from our members about PSR training which is almost unheard of for an "outside" provider. I now look forward to a reduction in the type and severity of back and knee injuries that have plagued our group in the past. Every firefighter has a right to a healthy, pain free career and retirement and the instruction and training provided by your company will benefit us all.

I highly recommend this program to everyone in the fire service.

2008 Update:

"PSR Program, after emplacement, our preventable injuries, particularly back related, were reduced to virtually zero and have been holding that way"

Pete Villasenor

Sincerely,

Pete Villasenor
